## Setting up libraries for various components

- Each major component requires a library in order for the IDE to support it.
- For example, to use the tricolor LED called Neopixel, you do the following:
  1. File → Tools → Manage Libraries
  2. In the Search box, type in “Neopixel” and install the following:
    - a) Adafruit NeoPixel
  3. In Search box, type in “Neopixel bus” and install the following:
    - a) NeoPixelBus by Makuna
